PROFESSIONAL SUMMARY

Junior Full-Stack Developer with hands-on experience building and maintaining web applications using Laravel, PHP, HTML, CSS, JavaScript, and MySQL. Completed a 6-month internship at the Department of Human Settlements and Urban Development, where I developed internal systems, managed structured databases, and collaborated with cross-functional teams to deliver reliable software solutions. Seeking a junior developer or software engineer role to contribute to scalable, high-quality web products.

EXPERIENCE

Junior Full-Stack Developer Intern
Nov 2025 – Apr 2026

Department of Human Settlements and Urban Development (DHSUD) – On-Site

- Developed and maintained an internal web system using Laravel and MySQL to support agency operations, reducing manual processing time by an estimated 30% and improving overall workflow efficiency.
- Managed, organized, and updated 1,000+ agency records in a relational MySQL database, ensuring data accuracy, reliability, and proper documentation standards.
- Provided technical support and collaborated with cross-functional teams to troubleshoot system bugs, implement feature enhancements, and deliver solutions aligned with end-user requirements.
- Participated in code reviews and version control workflows using Git and GitHub, maintaining clean and collaborative development practices.

PROJECTS

DHSUD Records Management System
Laravel, PHP, MySQL, JavaScript, Tailwind CSS

github.com/Rabenaben/DHSUD-R4A-Records

A web-based records management system built for DHSUD to digitize and streamline department record-keeping.

- Implemented role-based access control to manage user permissions across departments.
- Generated unique QR codes for each record entry, enabling instant lookup and reducing manual search time.
- Built automated due date notifications to alert departments of borrowed records nearing their return deadline.
- Developed search and filtering functionality to allow fast retrieval across large record volumes.
- Tested all API endpoints using Postman to verify request/response behavior before front-end integration.

Barangay Records Management System
PHP, HTML, CSS, JavaScript, MySQL

github.com/Rabenaben/BRGY-3-RMS

A capstone project — a full-featured records management system for barangay operations, built with vanilla PHP and no frameworks.

- Designed a user login system with role-based access for barangay staff and administrators.
- Integrated SMS notifications to alert residents of document pickup schedules and blotter follow-up meetings.
- Built report and document generation features for official barangay records and clearances.
- Implemented search and filtering for fast access to resident records and case histories.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, PHP, Laravel, JavaScript, HTML5, CSS3, Tailwind CSS
- **Database:** SQL, MySQL, relational database design, data management
- **Tools & Platforms:** Git, GitHub, Postman, VS Code
- **Testing & QA:** Debugging, testing, troubleshooting, system validation, feature & unit testing
- **Soft Skills:** Problem-solving, critical thinking, teamwork, communication, time management

EDUCATION

Bachelor of Science in Information Technology
2022 – 2026

City College of Calamba
